Hello Bridges Educators,

Thank you for participating in The Math Learning Center’s grade-level support workshops. During the workshops, our curriculum consultants will be referencing several resources available to Bridges educators. To ensure participants have a common understanding, we’re including this reference document with a basic definition for each of the resources. In some cases, we’ve included links that can help you learn more.

**Guidance Documents:** Revised scope and sequence, unit planners, unit screeners, and implementation guides for the 2020–21 school year. Collectively, these are referred to as guidance documents.

https://vimeo.com/445609008/3253e18a3d

**Screener:** A screener is a brief, five-question diagnostic assessment for each of the revised units in the 2020–2021 scope and sequence. Screeners are designed to help teachers identify unfinished learning that might hinder students’ ability to access the content of the unit. We recommend that teachers administer these screeners in place of the unit pre-assessments this year.

**DDM:** Digital Display Materials (DDMs) let you demonstrate interactive student materials on your classroom whiteboard or in a synchronous remote setting.

**Digital Work Places:** Digital Work Places are special versions of the Digital Display Materials that students can use on their own computers or tablets, no login required.

**TEA:** Tech-Enhanced Activities (TEAs) are tasks and activities based on Bridges in Mathematics Second Edition curriculum. The enhancements support learning in synchronous or asynchronous environments.

**Number Corner Support Resources for Remote Learning:** These resources support educators who are facilitating Number Corner in a remote environment. Each month’s collection includes a preview of the month’s workouts; options, models, and tools for using MLC’s free math apps for 2–3 featured workouts; and additional resources and notes for implementation in a synchronous or asynchronous environment.

**Math at Home:** Math at Home is a public, no-cost website that features sets of activities aligned to the units in the Bridges in Mathematics Second Edition curriculum. The activities include familiar mathematical routines, Work Place games, math games for families to play at home, curated online games, and practice books.
