The pages in this Practice Book can be assigned in order to provide practice with key skills during each unit of the Bridges in Mathematics curriculum. The pages can also be used with other elementary math curricula. If you are using this Practice Book with another curriculum, use the tables of pages grouped by skill (iii–xi) to assign pages based on the skills they address, rather than in order by page number.

The Math Learning Center grants permission to classroom teachers to reproduce blackline masters in appropriate quantities for their classroom use.

Bridges in Mathematics is a standards-based K–5 curriculum that provides a unique blend of concept development and skills practice in the context of problem solving. It incorporates the Number Corner, a collection of daily skill-building activities for students.

The Math Learning Center is a nonprofit organization serving the education community. Our mission is to inspire and enable individuals to discover and develop their mathematical confidence and ability. We offer innovative and standards-based professional development, curriculum, materials, and resources to support learning and teaching. To find out more, visit us at www.mathlearningcenter.org.

## Unit One: Computation, Algebraic Thinking & Probability

### Use anytime after Session 10
- Addition & Subtraction Fact Practice 1
- Sam’s Pet Graph 2
- Numbers in the Hundreds 3
- The Cafeteria Survey 4
- Fast Tens & Fast Nines Practice 5
- Jorge’s Saving Plans 6
- Missing Numbers Fill-In 7
- Name the Fraction 8
- Related Addition & Subtraction Facts 9
- Fraction Fill-Ins 10

### Use anytime after Session 20
- Dollar Signs & Decimal Points 11
- Telling Time to the Hour, Half Hour & Quarter Hour 12
- More Dollar Signs & Decimals 13
- Leaves & Flower Petals 14
- Bamboo Shoot Growth Graph 15
- Eyes, Ears & Whiskers 16
- Telling Time on Analog & Digital Clocks 17
- Eric’s Three-Coin Problem 18
- Understanding Place Value 19
- Alexis Walks Home from School 20
Unit Two: Place Value Structures & Multi-Digit Computation

Use anytime after Session 15
Expanded Notation: 3-Digit Numbers
Centimeters & Decimeters
Place Value Practice: 3-Digit Numbers
Writing Multiplication Equations
Loops & Groups
Alfonso’s Money Problem
More Related Addition & Subtraction Facts
Ling’s Basketball Cards
Addition & Subtraction Practice
Comparing Fractions

Use anytime after Session 30
Patterns & Sums
Adding Money Amounts
Double-Digit Addition
Telling Time to the Minute
Number Patterns
Using the Number Line to Find Differences
Inches & Feet
Double-Digit Subtraction
Target Practice
Subtraction Problems

Unit Three: Two- & Three-Dimensional Geometry

Use anytime after Session 9
Right, Acute & Obtuse Angles
Parallel, Intersecting & Perpendicular Lines
Angles & Sides
Perimeter Practice
Different Kinds of Quadrilaterals
Finding the Perimeters of Quadrilaterals
Shape Sorting
More Perimeter Practice
Dividing & Combining Shapes
Sandbox & Garden Problems

Use anytime after Session 15
Adding 2-Digit Numbers
All About Circles
More Subtraction Problems
Perimeters of Different Shapes
Thinking About Triangles
Different Types of Triangles
Drawing Line Segments, Lines & Rays
Unit Four: Multiplication & Division Patterns & Concepts

Use anytime after Session 11
Equal Jumps on the Number Line 61
Multiplication Story Problems 62
More Equal Jumps on the Number Line 63
T-Shirts, Erasers & Marbles 64
Multiplication Practice 65
More Multiplication Story Problems 66
Multiplication & Division Fact Families 67
Seconds & Minutes 68
Fact Families & Missing Numbers 69
Time in the Garden 70

Use anytime after Session 24
Multiplication Arrays 71
Frank the Frog & Bob the Beetle 72
More Multiplication Arrays 73
Flowers & Gifts 74
Missing Numbers & Fact Families 75
Cats & Kittens 76
More Missing Numbers & Fact Families 77
Family Math Night 78
Products & Sums 79
Andrea, Erica & Joe Go Shopping 80

Unit Five: Place Value & Computation with Larger Numbers

Use anytime after Session 10
Addition & Subtraction Review 81
Grams & Kilograms 82
Multiplication Review 83
Kilograms & Pounds 84
Rounding to the Nearest Ten 85
Rounding to the Nearest Hundred 86
Rounding to Estimate the Sum 87
Two Different Addition Methods 88
Round, Estimate & Find the Sum 89
Reasonable Estimates 90

Use anytime after Session 20
Rounding to the Nearest Ten, Hundred & Thousand 91
Close Estimates 92
Unit Eight: Bridge Design & Construction  Data Collection & Analysis

Use anytime after Session 10

Expanded Form & Rounding Review 131
Morning Math Games & Breakfast 132
Fraction Review 133
The Soccer Field 134
Basic Multiplication & Division Review 135
Sandwiches & Mini-Chip Cookies 136
Add, Subtract & Multiply 137

Bridges in Mathematics Grade 3 Practice Book Blacklines

There are 140 blacklines in this document, designed to be photocopied to provide third grade students with practice in key skill areas, including:

- place value and rounding
- multi-digit addition and subtraction
- basic multiplication and division
- multiplication beyond the basic facts
- computational estimation
- representing, comparing, and ordering fractions
- solving equations
- fractions
- geometry
- length, weight, capacity, perimeter
- time and money
- graphing
- problem solving

This set of blacklines also includes the following materials for the teacher:

- This introduction
- A complete listing of the student pages grouped by skill (see pages iii–xi)
- Answer Keys (see pages xi–xxviii)

Note: These teacher materials are not included in the bound student version of the Practice Book, which is sold separately.

While the Practice Book pages are not integral to the Bridges Grade 3 program, they may help you better address the needs of some or all of your students, as well as the grade-level expectations in your particular state. The Practice Book pages may be assigned as seatwork or homework after Bridges sessions that don't include Home Connections. These pages may also serve as a source of:

- skill review
- informal paper-and-pencil assessment
- preparation for standardized testing
- differentiated instruction

Every set of 10 pages has been written to follow the instruction in roughly half a Bridges unit. Practice pages 1–10 can be used anytime after Unit One, Session 10; pages 11–20 can be used anytime after Unit One, Session 20; and so on. (There are only 10 pages to accompany Units 7 and 8 because these are shorter units, usually taught toward the end of the school year.) Recommended timings are noted at the top of each page. If you are using this Practice Book with another curriculum, use the lists that follow to assign pages based on the skills they address.
Many even-numbered pages go naturally with the odd-numbered pages that immediately precede them. Between pages 41 and 60, for example, you'll see that many of the odd-numbered pages define key geometry terms, which students must use on the following even-numbered page. In these cases, it makes good sense to assign the two pages together so that students can refer to the definitions. Before sending any page home, review it closely and then read over it with your students to address confusion and define unfamiliar terms in advance. Some of the problems on certain pages have been marked with a Challenge icon. These problems may not be appropriate for all the students in your classroom; consider assigning them selectively.

Jorge’s Saving Plans

Jorge wants to buy a digital music player that costs $50. He offered to water his neighbor's plants for $5 per week. The graph below shows how much money Jorge will have if he saves it all.

1. How long will it take Jorge to earn $20? _______ weeks

2. How long will it take Jorge to earn enough money to buy the music player? _______ weeks

3. How many weeks would it take for Jorge to earn $60? _______ weeks

**CHALLENGE**

4. If Jorge spent $20 after the 7th week, how many weeks in all would it take him to have enough money to buy the music player?

Bamboo Shoot Growth Graph

In the spring, new bamboo shoots can grow up to 1 foot per day. Once they reach their full height, the shoots stop growing. The graph below shows how one shoot grew for 13 days.

1. How tall was the shoot on the 13th day?

2. On what day was the shoot about 6\(\frac{1}{2}\) feet tall?

3. Did the shoot ever get shorter in the 13 days?

4a. Did the shoot grow the same amount every day?

b. Explain how you can tell.

Alfonso’s Money Problem

Alfonso had $23. He spent $8 at the store during the day. That night, his dad gave him $5 for his allowance. How much money did Alfonso have at the end of the day?

1 What is this problem asking you to figure out?

2 Underline any information in the problem that will help you find the answer.

3a Use this space to solve the problem. Show all your work using numbers, words, and/or labeled sketches. Write the answer on the line below when you’re finished.

b Answer _______________________________________________________

2 Sketch and label a shape with 5 sides that has a perimeter of 120 feet.
Thinking About Triangles

1 What is the same about all of these triangles?

All of the triangles ______________________________________________________

2

a All of the triangles in group A have something in common. Fill in the circle next to the triangle that belongs with them.

b How do you know the triangle you picked belongs in group A?

3 What do these three triangles have in common?

All of the triangles ______________________________________________________
Different Types of Triangles

Use the following information to help solve the problems below.

- You can group triangles by the size of their angles.

<table>
<thead>
<tr>
<th>Acute Triangles</th>
<th>Right Triangles</th>
<th>Obtuse Triangles</th>
</tr>
</thead>
<tbody>
<tr>
<td>all 3 angles are acute</td>
<td>1 angle is a right angle</td>
<td>1 angle is an obtuse angle</td>
</tr>
</tbody>
</table>

- You can also group triangles by the lengths of their sides.

<table>
<thead>
<tr>
<th>Equilateral Triangles</th>
<th>Isosceles Triangles</th>
<th>Scalene Triangles</th>
</tr>
</thead>
<tbody>
<tr>
<td>all 3 sides are the same length</td>
<td>2 sides are the same length</td>
<td>no sides are the same length</td>
</tr>
</tbody>
</table>

1 Fill in the bubble to show what kind of triangle each one is.

- a
  - ( ) acute
  - ( ) right
  - ( ) obtuse

- b
  - ( ) acute
  - ( ) right
  - ( ) obtuse

- c
  - ( ) acute
  - ( ) right
  - ( ) obtuse

- d
  - ( ) equilateral
  - ( ) isosceles
  - ( ) scalene

- e
  - ( ) equilateral

  - ( ) scalene
Drawing Line Segments, Lines & Rays

Use the following information to help solve the problems below.

<table>
<thead>
<tr>
<th>A line segment connects two points.</th>
<th>A line goes through two points and keeps going in both directions.</th>
<th>A ray starts at one point and keeps going in just one direction.</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Line Segment" /></td>
<td><img src="image" alt="Line" /></td>
<td><img src="image" alt="Ray" /></td>
</tr>
</tbody>
</table>

1. Draw a line to connect the two points on each grid. You can use a ruler to make the lines straight.

   ![Grid A](image)  ![Grid B](image)  ![Grid C](image)

2. Draw a ray that starts at point E and goes through point F on each grid.

   ![Grid A](image)  ![Grid B](image)  ![Grid C](image)

3. Draw a line segment that goes from point A to point B on each grid.

   ![Grid A](image)  ![Grid B](image)  ![Grid C](image)
Drawing Shapes

1 Draw a shape with 5 sides and one right angle.

2 Draw a shape with only two parallel sides.

3 Draw a shape with 2 acute angles.

4 Draw a shape with only obtuse angles.

CHALLENGE

5 What is the smallest number of sides that the shape in problem 4 could have? Explain how you know.
Slides, Turns & Flips

There are three different kinds of transformations.

<table>
<thead>
<tr>
<th>Slide (translation)</th>
<th>Turn (rotation)</th>
<th>Flip (reflection)</th>

Garden Patch Problems

1 Liam wanted to put a fence around his vegetable garden patch. His brother asked him to put a fence around his garden patch too. Liam’s garden patch was 5 feet wide and 10 feet long. His brother’s patch was 6 feet wide and 7 feet long. How many feet of fencing will Liam need? Show all your work.

2 Liam bought too much fencing and had 26 feet of it left over. He and his brother decided to make a rectangle-shaped garden patch for their little sister. They wanted to use all the extra fencing to outline her garden patch. What could be the dimensions of the patch they make for their sister? (Use only whole numbers of feet.) Show all your work.

3 Draw and label two other ways Liam and his brother could use all 26 feet of fencing for their sister’s garden.
Equal Jumps on the Number Line

1 Complete the multiplication facts.

\[
\begin{array}{cccccc}
8 & 1 & 5 & 3 & 1 & 2 & 4 \\
\times 1 & \times 4 & \times 1 & \times 1 & \times 9 & \times 3 & \times 2 \\
\hline \\
2 & 2 & 5 & 7 & 2 & 9 & 2 \\
\times 2 & \times 10 & \times 2 & \times 2 & \times 6 & \times 2 & \times 8 \\
\hline 
\end{array}
\]

2 Show equal jumps on the number line to solve each multiplication problem. If you already know the answer, use the number line to show how someone else could solve the problem. The first jump is done for you each time.

**example**  \(3 \times 2 = \underline{6}\)

**a**  \(7 \times 2 = \underline{\phantom{0}}\)

**b**  \(9 \times 2 = \underline{\phantom{0}}\)

**c**  \(8 \times 2 = \underline{\phantom{0}}\)
Multiplication Story Problems

Write a story problem to go with each equation and picture. Then write the answer.

**example**

<table>
<thead>
<tr>
<th>a</th>

<td>×10</td>
</tr>
</tbody>
</table>

2. Show equal jumps on the number line to solve each multiplication problem. If you already know the answer, use the number line to show how someone else could solve the problem. The first jump is done for you.

Example: $2 \times 10 = \boxed{20}$

a. $3 \times 10 = \boxed{30}$

b. $5 \times 10 = \boxed{50}$
T-Shirts, Erasers & Marbles

1 Fill in the bubble next to the equation that will help you solve each word problem.

a Marco wants to buy a T-shirt for each of his 4 cousins. Each T-shirt costs $12. How much will Marco spend on the T-shirts in all?

☐ 4 + 12 = ?  ☐ 4 × 12 = ?  ☐ 12 − 4 = ?  ☐ 12 ÷ 4 = ?

b Kaylee has 4 erasers. Imani has 12 erasers. How many more erasers does Imani have than Kaylee?

☐ 4 + 12 = ?  ☐ 4 × 12 = ?  ☐ 12 − 4 = ?  ☐ 12 ÷ 4 = ?

C Lucia had 12 marbles. Her sister gave her 4 more. How many marbles does Lucia have now?

☐ 4 + 12 = ?  ☐ 4 × 12 = ?  ☐ 12 − 4 = ?  ☐ 12 ÷ 4 = ?

2 Use what you know about multiplication strategies to solve the problems below.

2 Find the mystery numbers for each pair of clues. A product is the number you get when you multiply numbers. A sum is a number you get when you add numbers.

**a** Use these clues to help
- The product of these two numbers is 12.
- The sum of these two numbers is 7.

The numbers are _____ and _____.

**b** Use these clues to help
- The product of these two numbers is 8.
- The sum of these two numbers is 9.

The numbers are _____ and _____.

Andrea, Erica & Joe Go Shopping

1 Andrea, Erica, and Joe were shopping with their dad. He said they could split the money that was left after they bought what they needed. They bought a shovel for $8, two packs of seeds that were $3 each, and two bags of flower bulbs that were $4 each. Their dad paid with two $20 bills. How much money did Andrea, Erica, and Joe each get?

a Write a list of steps you will need to take to solve the problem:

b Solve the problem. Show all your work.

C How do you know your answer makes sense? You could solve it another way, use estimation to show that your answer makes sense, or start with your answer and work backwards through the problem.

Rounding to Estimate the Sum

1 Rounding numbers can help you make good estimates. Round each pair of numbers to the nearest ten and then add the rounded numbers to estimate the sum.

<table>
<thead>
<tr>
<th>Numbers to Add</th>
<th>Rounded to the Nearest Ten</th>
<th>Estimated Sum</th>
</tr>
</thead>
<tbody>
<tr>
<td>( 237 + 456 )</td>
<td>( 240 + 460 )</td>
<td>( 700 )</td>
</tr>
</tbody>
</table>

The sum of 237 and 456 is about equal to \( 700 \).

\( a \) 268 + 322

\( \underline{268} + \underline{322} \)

The sum of 268 and 322 is about equal to ________.

\( b \) 47 + 824

\( \underline{47} + \underline{824} \)

The sum of 47 and 824 is about equal to ________.

2 Answer each question yes or no by rounding and estimating.

\( a \) Randy has $400. He wants to buy a video game player that costs $299 and two video games that each cost $53. Does he have enough money?

\( b \) Laura is reading a book that is 250 pages long. She read 187 pages last week. If she reads 28 pages tonight, will she finish the book?

\( c \) Anton and his dad are driving to another state. They have 460 miles to drive in all. They drove 289 miles yesterday. If they drive 107 miles today, will they complete their trip?
Two Different Addition Methods

There are many ways to solve addition problems. One is to break the numbers you are adding into ones, tens, and hundreds and then add them. Another way is to use a number line to add up from one number. See the examples below.

<table>
<thead>
<tr>
<th>Break Apart Method</th>
<th>Number Line Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>175</td>
<td>175</td>

<tr>
<td>+ 168</td>

</tr>
<tr>
<td>175 = 100 + 70 + 5</td>
<td>175 = 100 + 70 + 5</td>
</tr>
<tr>
<td>168 = 100 + 60 + 8</td>
<td>168 = 100 + 60 + 8</td>
</tr>
<tr>
<td>100 + 100 = 200</td>
<td>100 + 100 = 200</td>
</tr>
<tr>
<td>70 + 60 = 130</td>
<td>70 + 60 = 130</td>

b. 406
   + 357

c. 638
   + 185

d. 544

Round, Estimate & Find the Sum

Before you start adding numbers, it is a good idea to estimate what their sum will be. That way, you can tell if your final answer is reasonable. Round each pair of numbers to the nearest ten and then add the rounded numbers to estimate the sum. Then use the standard algorithm to find the exact sum.

<table>
<thead>
<tr>
<th>Numbers to Add</th>
<th>Round and Add</th>
<th>Estimated Sum</th>
<th>Exact Sum (use the algorithm)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ex</strong> 348</td>
<td>1 350</td>
<td>The sum will be about 520.</td>
<td>348 + 173 = 521</td>
</tr>
<tr>
<td></td>
<td>+ 170</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>520</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>1</strong> 267</td>
<td></td>
<td>The sum will be about ______.</td>
<td>267 + 338 = 605</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>2</strong> 438</td>
<td></td>
<td>The sum will be about ______.</td>
<td>438 + 583 = 1021</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>3</strong> 842</td>
<td></td>
<td>The sum will be about ______.</td>
<td>842 + 159 = 991</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Reasonable Estimates

1 Make a reasonable estimate before adding each pair of numbers. Then use any strategy you like to find the exact sum. Compare the exact sum to your estimate to make sure that it makes sense. If your answer does not make sense, double check your work or solve the problem another way.

<table>
<thead>
<tr>
<th>Numbers to Add</th>
<th>Estimated Sum</th>
<th>Exact Sum</th>
<th>Check your answer if the sum and estimate were far apart.</th>
</tr>
</thead>
<tbody>
<tr>
<td>a 386 + 275</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>b 517 + 378</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>c 263 + 477</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2 Use estimation to answer each question yes or no. Do not find exact sums.

a Shawna has a photo album with space for 160 pictures. She has 33 pictures of her family, 48 pictures from summer camp, and 57 pictures from school. Does she have enough pictures to fill the photo album?

b Fred needs 400 game markers to play a game with his classmates and their families on Family Math Night. He has 96 red markers, 123 blue markers, 106 yellow markers, and 72 green markers. Does he have enough game markers to play the game?
Rounding to the Nearest Ten, Hundred & Thousand

When you are rounding, look at the digit one place to the right of where you want to round. If you round to the nearest ten, look at the digit in the ones place. If you round to the nearest hundred, look at the digit in the tens place. If you round to the nearest thousand, look at the digit in the hundreds place.

If the digit is 5 or higher, round up. If it is less than 5, round down.

1 Underline the number in the ones place. Then circle up or down to show whether you are rounding up or down. Then round the number to the nearest ten.

example 64 rounds up/down to 60. 

a 26 rounds up/down to ______.

b 182 rounds up/down to ______.

c 1,208 rounds up/down to ______.

2 Underline the number in the tens place. Then circle up or down to show whether you are rounding up or down. Then round the number to the nearest hundred.

a 129 rounds up/down to ______.

b 467 rounds up/down to ______.

c 253 rounds up/down to ______.

d 3,348 rounds up/down to ______.

3 Underline the number in the hundreds place. Then circle up or down to show whether you are rounding up or down. Then round the number to the nearest thousand.

a 5,702 rounds up/down to ______.

b 4,207 rounds up/down to ______.

c 2,540 rounds up/down to ______.

d 8,395 rounds up/down to ______.

4 Complete the addition facts.

\[
\begin{array}{cccccccc}
5 & 7 & 10 & 7 & 9 & 12 & 25 \\
+ 6 & + 8 & + 11 & + 6 & + 8 & + 13 & + 26 \\
\end{array}
\]
Close Estimates

1 Estimate the sum for each problem below. Then solve it using the strategy that makes the best sense to you. If your exact answer does not come close to your estimate, try solving the problem with a different strategy.

<table>
<thead>
<tr>
<th>Numbers to Add</th>
<th>Estimate</th>
<th>Exact Sum</th>
<th>Does your exact sum come close to your estimate? (yes or no)</th>
<th>Check your answer if the sum and estimate were far from each other.</th>
</tr>
</thead>
<tbody>
<tr>
<td>a 176 + 235</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>b 4,309 + 246</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>c 3,817 + 2,436</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2 Fill in the missing numbers below.

\[
\begin{array}{c}
2 \square 3 \\
+ \square 3 \square \\
\hline 7 \ 1 \ 9
\end{array} \quad \begin{array}{c}
4 \ 1 \ 7 \\

\end{array} \quad \begin{array}{c}
7 \ \square \ 9 \\
+ \ 3 \ 6 \ 1 \\
\hline \ \square \ 1 \ 0 \ \square
\end{array}
\]
**Round & Subtract**

1. Rounding numbers can help you make good estimates. Round each pair of numbers to the nearest *ten* and then subtract the rounded numbers to estimate the difference.

<table>
<thead>
<tr>
<th>Numbers to Subtract</th>
<th>Rounded to the Nearest Ten</th>
<th>Estimated Difference</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ex</strong> 867 – 485</td>
<td>870 – 490</td>
<td>380</td>
</tr>
</tbody>
</table>

The difference between 867 and 485 is about equal to **380**.

**a** 608 – 263

The difference between 608 and 263 is about equal to ________.

**b** 732 – 546

The difference between 732 and 546 is about equal to ________.

2. Now round to the nearest *hundred* and then subtract to estimate the difference.

**a** 1,508 – 620

The difference between 1,508 and 620 is about equal to ________.

**b** 2,482 – 936

The difference between 2,482 and 936 is about equal to ________.
Add to Find the Difference

You can add up from the smaller number to find the difference between two numbers. A number line can help you keep track of your jumps. Add up all the jumps to find the difference between the two numbers.

Use the number line to make jumps from the smaller number to the larger number. Add up all the jumps to find the difference.

Estimates & Exact Answers

1 Use estimation to answer each question yes or no.

a Sue has $346 dollars. She wants to buy a bike and still have $150 left. She found a bike that costs $189. Can she buy it and still have $150 left?

b Bruce decided to give away some of his 400 baseball cards. He wants to keep at least 150 of them. If Bruce gives one friend 167 cards and another friend 112 cards, will he have at least 150 left?

c Luis and Carlos are in a reading contest to see who can read the most pages. Luis wants to win by at least 150 pages. Carlos read 427 pages. If Luis reads 526 pages, will he win by at least 150 pages?

2 First estimate the difference between the two numbers. You could round them and then subtract, or you could think about what you have to add to the smaller number to get to the bigger number. Then find the exact difference between the two numbers. Check your answer with your estimate to be sure it makes sense: if it doesn’t make sense, check your work or do it another way.

**Place Value**  Four-Digit Numbers

1. Complete each equation by writing each number in standard form.

   **Example**  \(8,000 + 20 + 6 = \underline{8,026}\)

   a. \(4,000 + 800 + 30 + 1 = \underline{4,831}\)

   b. \(9,000 + 400 + 60 + 2 = \underline{9,462}\)

   c. \(\underline{7,006} = 7,000 + 60 + 2\)

   d. \(5,000 + 300 + 80 = \underline{5,380}\)

   e. \(\underline{2,014} = 2,000 + 100 + 4\)

2. Fill in the missing numbers or words.

3. Use your estimation skills to answer each question *yes* or *no* without adding or subtracting to find an exact answer.

   a. The Lighting Bolts need 200 points to make it to the next round of the basketball tournament. So far, they have 154 points. If they score 37 more points by the end of the game, will they make it to the next round?

   b. Simon has $300 to spend. Can he afford to buy a bike for $150, safety lights for $34, and a good helmet for $56?
Flora’s Book & Greg’s TV

1 Flora was reading a book that was 283 pages long. She read 56 pages on Thursday, 45 pages on Friday, and 72 pages on Saturday. How many pages will she have to read on Sunday to finish her book? Show all your work.

2 Greg wants to buy a new TV that costs $1,679. He has $326 in his bank account. His grandma gave him $50 for his birthday. He will earn $385 mowing lawns this summer. How much more money will he need to buy the TV? Show all your work.
Estimate Before You Subtract

Before you start subtracting numbers, it is a good idea to estimate what the difference will be. That way, you can tell if your final answer is reasonable. Round each pair of numbers to the nearest ten and then subtract the rounded numbers to estimate the difference. Then use the algorithm to find the exact difference.

a. Sara got 5 packs of baseball cards from each of her 3 cousins. She gave 2 packs to her brother. How many packs of baseball cards did she have left?

\(5 - 3\) \(?\) \(5 - 3 + 2\) \(?\) \((5 \times 3) - 2\) \(?\) \((5 - 2) \times 3\) \(?\)

Sara has \(\underline{\phantom{0}}\) packs of baseball cards.

b. The pet shop got 84 fish. They sold 34 of the fish right away. They divided the rest of the fish into 2 tanks. How many fish were in each tank?

\(84 - 34\) \(?\) \((84 - 34) \div 2\) \(?\) \((84 + 34) \times 2\) \(?\) \(84 + 34 + 2\) \(?\)

There are \(\underline{\phantom{0}}\) fish in each tank.

CHALLENGE

3 Fill in the missing number to make each equation true.

   \[a \quad (20 \times \underline{\phantom{1}}) \div 4 = 25\]  
   \[b \quad (36 \div 4) \times \underline{\phantom{1}} = 81\]  
   \[c \quad 350 = (\underline{\phantom{1}} \times 50) - 50\]  
   \[d \quad 1,826 = (10 \times \underline{\phantom{1}}) - 100 - 74\]  
   \[e \quad (245 + \underline{\phantom{1}}) \times 3 = 900\]  
   \[f \quad (1,008 - 508) \div \underline{\phantom{1}} = 5\]  

4 Use <, >, or = to complete each number sentence.

   \[a \quad (25 \times 4) \div 10 \quad 81 \div 9\]  
   \[b \quad (514 - 489) \times 6 \quad 50 \times 3\]  
   \[c \quad (75 \times 2) - 51 \quad (100 \div 2) \times 4\]  
   \[d \quad (328 + 22) - 150 \quad 500 \div 2\]  
   \[e \quad (739 + 261) \div 10 \quad 20 \times 5\]  
   \[f \quad 5 \times 5 \times 5 \quad (200 \div 2) + 50\]
Fraction Problems

1 Fill in the missing numerators on the number line below.

2 Use the number line above to help answer the questions below.
   a Chris ran $\frac{8}{10}$ of a mile. Dan ran $\frac{3}{5}$ of a mile. Who ran farther?
   b Jenny has $\frac{4}{10}$ of a meter of yarn. Sue has $\frac{4}{5}$ of a meter of yarn. Who has more yarn?
   c Lewis and his brother Sam were walking to their grandma's house. Lewis walked $\frac{7}{10}$ of the way and then stopped to rest. Sam walked half the way there and then stopped to rest. Who walked farther before stopping to rest?

3 Use the number line above to compare the fractions below. Use the symbols $<$, $>$, or $=$ to complete each number sentence.

Thinking About Fractions

1. Marty ordered a small milk at lunch. His brother Bob ordered a large milk. They each drank three-fourths of their milk. Who drank more milk, Marty or Bob? Explain how you know.

2. At the movies Laura got a large popcorn. Her sister Susan got a small popcorn. They each ate half their popcorn. Who ate more popcorn, Laura or Susan? Explain how you know.

3. At lunch Steven ate a third of a jumbo burger. His mother ate a third of a regular burger. Who ate more, Steven or his mom?

4. Jim drank \( \frac{2}{3} \) of a bottle of juice that was 24 ounces. Frank drank \( \frac{3}{4} \) of a bottle of juice that was 16 ounces. Who drank more juice? Use pictures, numbers, and/or words to explain how you know.
Fruit Fractions

1 A farm stand was selling 2-pound boxes of strawberries. Noah’s family ate \( \frac{2}{5} \) of a box. Zach’s family ate \( \frac{3}{4} \) of a box. Which family ate more strawberries? Use pictures, numbers, and/or words to explain how you know.

2 Ronda and Shawna bought a bunch of grapes. Ronda ate \( \frac{5}{16} \) of the grapes and Shawna ate \( \frac{1}{2} \) of the grapes. Who ate more grapes? Use pictures, numbers, and/or words to explain how you know.

3 Violet’s mom got a melon at the store and cut it into 8 equal pieces. Violet ate \( \frac{3}{8} \) of the melon. Her mom ate \( \frac{1}{4} \) of the melon. Who ate more melon? Use pictures, numbers, and/or words to explain how you know.
Pizza Problems

1  Jim and Emma were eating pizza for lunch. Jim ate \(\frac{2}{6}\) of the pizza. Emma ate \(\frac{3}{6}\) of the pizza. How much pizza did they eat altogether? Use pictures, numbers, and/or words to explain how you got the answer.

2  Rosa and Carmen made two mini-pizzas for lunch. They cut both pizzas into fourths. Rosa ate \(\frac{3}{4}\) of a pizza. Carmen ate \(\frac{3}{4}\) of a pizza. Altogether, how much pizza did they eat? Use pictures, numbers, and/or words to explain how you got the answer.

CHALLENGE

3a  Carl and his brother Noel ordered a pizza. Carl ate \(\frac{1}{4}\) of the pizza. Noel ate \(\frac{3}{8}\) of the pizza. How much of the pizza did they eat altogether? Use pictures, numbers, and/or words to explain how you got the answer.

b  How much of the pizza was left after Carl and Noel were done eating? Use pictures, numbers, and/or words to explain how you got the answer.
Money & Chair Problems

1. Jasmine's neighbor paid her $32 for helping with some yard work. Jasmine gave her brother $8 because he helped her with some of the work. Then she went shopping with the rest of the money. She bought 3 books that were $6 each and a bottle of juice for $1.89. How much money did she have left? Show all your work.

2a. The third graders are putting on a play for the fourth and fifth graders. They need to set up chairs in the gym for the fourth and fifth graders to sit on. There are 86 fourth graders, 79 fifth graders, 3 fourth grade teachers, and 3 fifth grade teachers. How many chairs will the third graders need to set up? Show all your work.

Lemonade & Bracelets

1a Philipe is making lemonade with his dad to serve at their party. Their recipe makes 6 glasses of lemonade. The recipe calls for 4 lemons, 1 cup of sugar, and 6 cups of water. If they want to make enough lemonade for 30 people to drink a glass, how many lemons will they need to buy?

b Use words, numbers, or pictures to explain how you know your answer above makes sense.

2a Lisa is making bracelets for four of her friends. She needs 18 beads for each bracelet. How many beads does she need altogether?

b Use words, numbers, or pictures to explain how you know your answer above makes sense.

C If each bead costs 15¢, how much would it cost for Lisa to buy all those beads? Show your work.
Pencils & Cupcakes

1a Mr. Sutton bought 36 mechanical pencils to give away as prizes for his students. \( \frac{1}{4} \) of the pencils were red and \( \frac{1}{3} \) of the pencils were purple. Were there more red or purple pencils? Use pictures, numbers, and/or words to explain how you know.

1b The rest of the pencils were yellow. How many yellow pencils did Mr. Sutton buy? Use pictures, numbers, and/or words to explain your answer.

2a Ellie made 24 cupcakes to take to her friend’s party. She put vanilla icing on them all. Then she put chocolate sprinkles or red sugar on some of them. She put chocolate sprinkles on \( \frac{1}{4} \) of them. She put red sugar on \( \frac{1}{2} \) of them. She left the rest of them plain. What did most of her cupcakes have on them?

2b What fraction of Ellie’s cupcakes had no sprinkles or sugar on top? How many cupcakes was that? Use pictures, numbers, and/or words to explain your answers.
Shopping Problems

1. Serena bought 3 T-shirts for $13 each. She also bought a skirt for $42 and a jacket for $76. Her sister Lisa got a pair of jeans for $34 and a pair of sneakers for $46. Who spent more money? Exactly how much more money did she spend? Show all your work.

2. It is Rick’s turn to bring oranges for his soccer team to eat at half-time. There are 15 people on his team. He wants each person to be able to eat 2 oranges. Oranges cost $1.20 per pound, and each orange weighs about half a pound. About how much will it cost for Rick to get enough oranges for the team? Show all your work.

3 Pick the equation that will help you solve the problem. Then solve the problem.
Jake found 32 shells on the beach. He gave half of them to his brother. Then his sister gave Jake 18 more shells. How many shells does Jake have now?

\[ (32 \times 2) + 18 = ? \quad (32 \times 2) - 18 = ? \quad (32 \div 2) + 18 = ? \]

Jake has ______ shells.
**Multiplying Two-Digit by One-Digit Numbers**

You can break a two-digit number into tens and ones to multiply it by another number. Use this method to solve the multiplication problems below.

Quadrilateral Review

A quadrilateral is a shape with 4 sides. Here are some different kinds of quadrilaterals.

<table>
<thead>
<tr>
<th>Trapezoid: a quadrilateral with exactly 1 pair of parallel sides</th>
<th>Rectangle: a quadrilateral with 2 pairs of parallel sides and 4 right angles</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Trapezoid" /></td>
<td><img src="image" alt="Rectangle" /></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Rhombus: a quadrilateral with 4 sides that are all the same length</th>
<th>Square: a quadrilateral with 4 right angles and 4 sides that are all the same length</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Rhombus" /></td>
<td><img src="image" alt="Square" /></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Parallelogram: a quadrilateral with 2 pairs of parallel sides</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Parallelogram" /></td>
</tr>
</tbody>
</table>

1. Draw in the missing sides to complete each quadrilateral.

   a. square
   b. trapezoid
   c. parallelogram
   d. trapezoid

2. Mayra says that squares and rectangles are parallelograms too, but rhombuses are not. Is she correct? Explain your answer. Use the grid if you want to.

Angles, Sides & Shapes Review

Use the information below to help solve the following problems.

Right Angle
- exactly 90°
- a square corner

Acute Angle
- smaller than a right angle

Obtuse Angle
- larger than a right angle

Parallel Sides
- would never cross if they went on forever

1 Follow the instructions to draw a quadrilateral on grids a, b and c. There will be more than one way to draw a figure that matches each description. Then fill in the bubble next to the word or words that name the figure you drew.

**example** It has 4 equal sides and no right angles.

**a** It has only 1 pair of parallel sides and no right angles.

**b** It has 2 pairs of parallel sides and no right angles.

**c** It has exactly 2 right angles.

- ○ rhombus
- ○ trapezoid
- ○ parallelogram

**CHALLENGE**

2 Shamim says that you can draw figure 1b with all obtuse angles. Is he correct? Explain how you know. You can draw on the grid to help.
